Office Action Summary

Application No.

09/925,037

Applicant(s)

RHO ET AL.

Examiner

Anthony T Perry

Art Unit

2879

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 October 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 and 21-51 is/are pending in the application.
- 4a) Of the above claim(s) 10-17, 50 and 51 is/are withdrawn from consideration.
- 5) ☒ Claim(s) 3, 35-37, 39-46, 48 and 49 is/are allowed.
- 6) ☒ Claim(s) 1, 2, 4-9, 21-32 and 38 is/are rejected.
- 7) ☒ Claim(s) 33, 34 and 47 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 09 August 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Response to Amendment

The Amendment, filed on 10/12/04, has been entered and acknowledged by the Examiner.

Claims 49-51 have been added.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5, 7, 8, 9, and 22, are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

MPEP 2111.03 states that the transitional phrase, "consisting essentially of," limits the scope of a claim to the specified materials or steps and those that do not materially affect the basic and novel characteristic(s) of the claimed invention. A "consisting essentially of" claim occupies a middle ground between closed claims that are written in a "consisting of" format and fully open claims that are drafted in a "comprising" format. Claims 5, 7, 8, 9, and 22 recite a "group consisting essentially of." It is unclear what is included in the respective groups.

The Examiner suggests replacing "group consisting essentially of" with --group consisting of--.

Claim Rejections - 35 USC § 102/103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2879

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2, 4-6, 21-32, and 42-43 are rejected under 35 U.S.C. 102(e) as being anticipated by and alternatively under 35 U.S.C. 103(a) as being obvious over Yamauchi et al. (US 6,351,061).

Regarding claims 1-2 and 42-43, Yamauchi teaches a cathode comprising a base metal 2 and an electron emissive material layer 3 attached on the base metal 2 (Fig. 1). Yamauchi teaches that the electron emissive material layer 3 includes a surface roughness measured from a distance between a highest point and a lower point of the surface of the electron emissive material layer being at most 15 microns (col. 5, lines 15-19). This range includes the range of not more than 5 microns. Yamauchi further teaches that if the difference between the highest and lowest point is 10 microns or less that an even better current density distribution can be obtained, anticipating that a cathode having a smaller surface roughness would exhibit even better current density distribution (col. 5, lines 20-22).

Since the Yamauchi reference teaches that a difference between the highest and lowest point of not more than 10 microns provides a cathode having a better current density distribution

Art Unit: 2879

than one having a surface roughness of not more than 15 microns, one of ordinary skill in the art would have found it obvious to provide a surface roughness less than not more than 10 microns (including not more than 8 and not more than 5 microns).

Regarding claim 4, Yamauchi teaches that the thickness of the electron emissive material layer is 70 microns (col. 4, lines 45-49). A prima facie case of obviousness exists where the claimed ranges and prior art ranges do not overlap but are close enough that one skilled in the art would have expected them to have the same properties. *Titanium Metals Corp. of America v. Banner*, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985) (Court held as proper a rejection of a claim directed to an alloy of “having 0.8% nickel, 0.3% molybdenum, up to 0.1% iron, balance titanium” as obvious over a reference disclosing alloys of 0.75% nickel, 0.25% molybdenum, balance titanium and 0.94% nickel, 0.31% molybdenum, balance titanium.).

Regarding claim 5, the Examiner notes that the claim limitation that “the electron emissive material layer being attached on said base metal by one method selected from the group consisting essentially of printing and deposition” is drawn to a process of manufacturing which is incidental to the claimed apparatus. In spite of the fact that a product-by-process claim may recite only process limitations, it is the product and not the recited process that is covered by the claim. Further, patentability of a claim to a product does not rest merely on the difference in the method by which the product is made. Rather, is the product itself which must be new and not obvious. It is well established that a claimed apparatus cannot be distinguished over the prior art by a process limitation. Consequently, absent a showing of an unobvious difference between the claimed product and the prior art, the subject product-by-process claim limitation is not afforded patentable weight (see MPEP 2113). Therefore, it is the position of the examiner that it would have been obvious to one of ordinary skill in the art that the electron emissive material layer

Art Unit: 2879

disclosed by Yamauchi is at least a fully functional equivalent to the Applicant's claimed electron emissive material layer as evidenced by Yamauchi's suggestion of all of the Applicant's claimed structural limitations.

Regarding claim 6, the Examiner notes that the claim limitation that "the electron emissive material layer being attached on said base metal by a screen printing method" is drawn to a process of manufacturing which is incidental to the claimed apparatus. In spite of the fact that a product-by-process claim may recite only process limitations, it is the product and not the recited process that is covered by the claim. Further, patentability of a claim to a product does not rest merely on the difference in the method by which the product is made. Rather, is the product itself which must be new and not obvious. It is well established that a claimed apparatus cannot be distinguished over the prior art by a process limitation. Consequently, absent a showing of an unobvious difference between the claimed product and the prior art, the subject product-by-process claim limitation is not afforded patentable weight (see MPEP 2113).

Therefore, it is the position of the examiner that it would have been obvious to one of ordinary skill in the art that the electron emissive material layer disclosed by Yamauchi is at least a fully functional equivalent to the Applicant's claimed electron emissive material layer as evidenced by Yamauchi's suggestion of all of the Applicant's claimed structural limitations.

Regarding claims 21-32 and 38, claims 21-32 and 38 describe compositions that are found only in intermediate products involved with the process of manufacturing the cathode. The claimed compositions are present in the electron emissive paste at the time of application to the base metal but are not found in the electron emissive layer of the final product. Consequently, the claimed compositions are considered to be product-by-process limitations and have not been afforded patentable weight since they are absent in the final product.

Art Unit: 2879

Regarding claim 47, Yamauchi teaches the emissive material layer having a uniform size of pores between oxide particles having a uniform size (see for example col. 1, lines 24-36).

Allowable Subject Matter

Claims 3, 35-37, 44-46, 48, and 49 are allowed.

The following is a statement of reasons for allowance: the references of the prior art of record fails to teach or suggest the combination of the limitations as set forth in claims 3 and 44, and specifically comprising the limitation of the electron emissive material layer having a density of 2 to 5 mg/mm³. The best prior art of record teaches that the density of the electron emissive material layer is 0.8 mg/mm³.

Claims 39-41 are allowed due to their dependency status from base claim 3 which is allowed.

Regarding claims 35 and 45-46, the prior art does not specifically state the size of the pores, and therefor fails to teach or suggest the combination of the limitations as set forth in claims, specifically comprising the limitation of the pores between the oxide particles being no greater than 8 microns.

Claims 36-37 and 49 depend from claim 35.

Claim 48 depends from claim 45.

Claims 33-34 and 47 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding claims 33 and 47, the references of the prior art of record fails to teach or suggest the combination of the limitations as set forth in claims 33 and 47, and specifically comprising the limitation of the oxides particles being of uniform size. The prior art of record

Art Unit: 2879

only teaches an average particle size of 10 microns and does not specifically state that the particles have equal sizes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed 7/31/03, with respect to the rejection of claims 1, 2, 4, 5, and 6 under 35 U.S.C. 102(e) as being anticipated by Yamauchi et al. (US 6,351,061) have been fully considered but are not persuasive.

In response to the argument that the Yamauchi reference does not anticipate the ranges of rough layer being 8 or less and 5 or less microns, the examiner disagrees. As stated above the Yamauchi reference specifically states that the range of the rough layer is 15 or less and more preferably 10 or less microns and therefore anticipates the claimed narrower ranges. The Examiner agrees that no specific examples falling within the claimed ranges are disclosed, and that a case by case determination must be made as to anticipation.

The MPEP § 2131.03 states "In order to anticipate the claims, the claimed subject matter must be disclosed in the reference with "sufficient specificity to constitute an anticipation under the statute." What constitutes a "sufficient specificity" is fact dependent. If the claims are directed to a narrow range, the reference teaches a broad range, and there is evidence of unexpected results within the claimed narrow range, depending on the other facts of the case, it may be reasonable to conclude that the narrow range is not disclosed with "sufficient specificity" to constitute an anticipation of the claims."

Art Unit: 2879

Although the specification of the current application teaches that the range be 8 or less and more preferably 5 or less microns, it does not provide evidence of any unexpected results within the claimed narrower range **compared to the range of 10 or less microns**. Accordingly, the narrower ranges are considered to be disclosed with “sufficient specificity”, therefore, the claimed ranges are anticipated by Yamauchi.

With regards to the arguments regarding claims 5-6, the MPEP 2113 states, “The structure implied by the process steps should be considered when assessing the patentability of product-by-process claims over the prior art, especially where the product can only be defined by the process steps by which the product is made, or where the manufacturing process steps would be expected to impart distinctive structural characteristics to the final product. See, e.g., In re Garner, 412 F.2d 276, 279, 162 USPQ 221, 223 (CCPA 1979) (holding “interbonded by interfusion” to limit structure of the claimed composite and noting that terms such as “welded,” “intermixed,” “ground in place,” “press fitted,” and “etched” are capable of construction as structural limitations.)”

The MPEP lists process terms and simply states that such terms “are capable of construction as structural limitations.” It is the position of the Examiner that the claimed product can be defined by process steps other than process steps claimed, including the process steps taught by Yamauchi. The claimed manufacturing process steps are not found to impart structural characteristics to the final product different than the final product as disclosed by Yamauchi. The Examiner agrees that certain process steps may lead to a differently structured final product and in which case are considered patentable. However, the Applicant has not provided teachings to suggest that such a differently structured product, as compared with the product disclosed by Yamauchi, is produced.

Art Unit: 2879

The MPEP states, "PRIOR ART WHICH TEACHES A RANGE WITHIN, OVERLAPPING, OR TOUCHING THE CLAIMED RANGE ANTICIPATES IF THE PRIOR ART RANGE DISCLOSES THE CLAIMED RANGE WITH "SUFFICIENT SPECIFICITY" When the prior art discloses a range which touches, overlaps or is within the claimed range, but no specific examples falling within the claimed range are disclosed, a case by case determination must be made as to anticipation. In order to anticipate the claims, the claimed subject matter must be disclosed in the reference with "sufficient specificity to constitute an anticipation under the statute." What constitutes a "sufficient specificity" is fact dependent. If the claims are directed to a narrow range, the reference teaches a broad range, and there is evidence of unexpected results within the claimed narrow range, depending on the other facts of the case, it may be reasonable to conclude that the narrow range is not disclosed with "sufficient specificity" to constitute an anticipation of the claims. The unexpected results may also render the claims unobvious. The question of "sufficient specificity" is similar to that of "clearly envisaging" a species from a generic teaching. See MPEP § 2131.02. A 35 U.S.C. 102 /103 combination rejection is permitted if it is unclear if the reference teaches the range with "sufficient specificity."

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to *Anthony Perry* whose telephone number is (571) 272-2459. The examiner can normally be reached between the hours of 9:00AM to 5:30PM Monday thru Friday.

Art Unit: 2879

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel, can be reached on (571) 272-24597. **The fax phone number for this Group is (703) 872-9306.**

Communications via Internet e-mail regarding this application, other than those under 35 U.S.C. 132 or which otherwise require a signature, may be used by the applicant and should be addressed to [Anthony.perry@uspto.gov].

All Internet e-mail communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly signed express waiver of the confidentiality requirements of 35 U.S.C. 122. This is more clearly set forth in the Interim Internet Usage Policy published in the Official Gazette of the Patent and Trademark on February 25, 1997 at 1195 OG 89.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0956.
